

Full Name:
Worksheet: CSF 202 / Lab 3.2
Semester: Spring 2025

CSF 202 Lab 3.2: Start Using Command-Line Tools

Make sure you've completed all the weekly material on Brightspace before starting the assignment. If you cannot edit this worksheet make a copy in your own Google Drive, by clicking *File > Make a Copy*.

Part 1: Overview of Task

As mentioned in Lab 1.1, we will be using some of the Immersive Labs modules in our assignments and labs throughout the semester. To access these modules, you will need to create a student account with your academic email (@uri.edu).

You can get started by going to their [student registration page](#) and creating a student account with your university email.

Once you have an account and can access all of the Immersive Labs modules, you should be all set to continue to the next page!

Part 2: Linux Command Line Introduction

This week, we took a close look at the linux command line and macOS. It's important to note that many of the Linux commands we learned this week can also be used on macOS machines because the kernels of these operating systems are based on Unix. `cd` , `ls` , `mkdir` , `vi` and more are all commands that can be used in both Linux and macOS terminal environments

Complete the [Command Line Introduction](#) lab on ImmersiveLabs (you will need to login with the account you created using your URI email address in lab 1.1). After reading the briefing tab, use the command line to execute the appropriate commands and answer the questions on the left pane.

Entering commands

To perform most tasks on the CLI, you need to press the **Enter** key on your keyboard to execute the CLI when you have a cursor.

If your

Successful commands and th

Most of the time, a successful command is guaranteed to run successfully is 'ls'. Try entering **ls** into your terminal.

The successful output of the **ls** command is:

!? Question 1 (5 pts): Paste a screenshot of your badge you receive after completing this ImmersiveLabs module in the box below, such as this example:

!? Question 2 (5 pts): Complete the ImmersiveLabs [Moving Around lab](#) on navigation in the Linux terminal. Paste a screenshot of your badge you receive after completing this ImmersiveLabs module in the box below:

!? Question 3 (5 pts): Complete the ImmersiveLabs [Linux Permissions lab](#). Paste a screenshot of your badge you receive after completing this ImmersiveLabs module in the box below:

!? Question 4 (5 pts): Complete the ImmersiveLabs [Changing Things lab](#). Paste a screenshot of your badge you receive after completing this ImmersiveLabs module in the box below:

Part 3: Command Line Tools in Your VM

Now, let's do a practical VM exercise using your new Linux command line knowledge.

Step 1: On CyberLab, clone the Lab 3.2 VM.

Step 2: Boot the VM, and login using the following credentials:

Username: cyberlab

Password: Pa55word

Step 3: From the Applications menu, open the terminal menu.

Step 4: Use the cd command to navigate to the Documents folder in your terminal.

Step 5: Use the various CLI commands to answer the following questions.

!? Question 5 (5 pts): What file(s) are present in the Documents folder? Provide the names of the files.

Apple-pie-yummy.jpeg, poem.txt

! Question 6 (5 pts): Provide the date last modified of each file in the Documents.
Explain the command you used to determine this information.

Apple-pie-yummy.jpeg: dec 24, 2023
Poem.txt: feb 5, 2024

I used 'ls -la' to show permissions, file names including hidden files, and date created.

! Question 7 (5 pts): How could you read the contents of the text file? Use a command to read it, and provide a screenshot of the command and the output.

Using the cat command

```
In the halls of learning at Rhode Island's domain,  
CSF 202, a cybersecurity terrain.  
Firewalls and codes, a digital quest,  
Guarding against threats, putting them to rest.  
  
In URI's realm, where knowledge takes flight,  
CSF 202, a beacon shining bright.  
Students navigate the cybernetic sea,  
Securing the future, where they aim to be.
```
